

Why can't your knowledge be devoid of repetitions?

- What properties are exhibited by everyone and everything?
- What properties of things could be known through you?
- Should the people who could not even identify and list the properties exhibited by everyone and everything be honored with degrees and diplomas?
- Should the degrees and diplomas awarded by universities and institutions which could not even identify and list the properties exhibited by everyone and everything be honored?
- Should one have formal education in order to identify and explain divisibility, comparability, connectivity, disturbability, reorderability, substitutability and satisfiability exhibited by everyone & everything?
- Should the people who ask the question, "what properties are exhibited by everyone and everything?" be condemned and punished?

*"Electronic technology now suggests a different view, not necessarily wiser but at least tempered by a sense of ultimate limits and characterized by a new definition of progress. For a computer's time is finite, and its progress is cyclic. **Progress through repetition** has in fact become a trademark of the whole industrial era, with machines of all kinds producing thousands of identical parts, and has led to the material triumphs as well as the worst excesses of industrialism. Yet the computer occupies a special place because its cycles produce not only washing machines or automobiles but units of information, fragments of ideas. The computer suggests that progress through repetition not only in the industrial plant but in the whole realms of logical and mathematical thought."*

- Turing's man: western culture in the computer age By J. David Bolter

"Exvignis Association (EA) is spreading intelligence more effectively and efficiently to everyone much better than all the institutions and universities that graduate students with degrees and diplomas. EA's method of teaching appears to make formal education meaningless and has caused much emotional stress to the leaders of the teaching institutions."

Not for those who don't want to know the properties of things

The questions no one should ask

No one can have the knowledge to make a thing which cannot exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substitutability and 7. satisfiability. So, people must be educated not to ask questions in this connection in order to make them slaves who obediently follow the directives of academic authorities.

- ❖ *Can a thing which cannot exhibit divisibility be made?*
- ❖ *Can a thing which cannot exhibit comparability be made?*
- ❖ *Can a thing which cannot exhibit connectivity be made?*
- ❖ *Can a thing which cannot exhibit disturbability be made?*
- ❖ *Can a thing which cannot exhibit reorderability be made?*
- ❖ *Can a thing which cannot exhibit substitutability be made?*
- ❖ *Can a thing which cannot exhibit satisfiability be made?*

Divisibility is the property without which no one can either be a part or be a whole. Comparability is the property without which no one can either be an equivalence or be a difference. Connectivity is the property without which no one can either be a link or be a limit. Disturbability is the property without which no one can either be an influence or be a sensation. Reorderability is the property without which no one can either be an origin or be a derivative. Substitutability is the property without which no one can either be a constituent or be a substituent. Satisfiability is the property without which no one can either be a requirement or a fulfillment.

- ❖ *What cannot exhibit divisibility?*
- ❖ *What cannot exhibit comparability?*
- ❖ *What cannot exhibit connectivity?*
- ❖ *What cannot exhibit disturbability?*
- ❖ *What cannot exhibit reorderability?*
- ❖ *What cannot exhibit substitutability?*
- ❖ *What cannot exhibit satisfiability?*

People who have knowledge on the questions found in this document won't consider you as an intellect!

No one should ask the above questions because it will **expose the repetitions and reproductions in the 'much celebrated' human knowledge acquired through the greatest efforts and difficulties by the highly educated minds.**

- ❖ *What would not happen if no thing could exhibit divisibility?*
- ❖ *What would not happen if no thing could exhibit comparability?*
- ❖ *What would not happen if no thing could exhibit connectivity?*
- ❖ *What would not happen if no thing could exhibit disturbability?*
- ❖ *What would not happen if no thing could exhibit reorderability?*
- ❖ *What would not happen if no thing could exhibit substitutability?*
- ❖ *What would not happen if no thing could exhibit satisfiability?*

Do not use the questions found in this document to make everyone look like an ass!

Everyone and everything can exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substitutability and 7. satisfiability. **Everyone who could not identify these properties would have no knowledge on the properties of things.** Why can't one make a thing which cannot exhibit these properties? Can a thing which is indistinguishable from its properties be analyzed? **Have you ever been educated to indentify and list the properties which are exhibited by everyone and everything?** Is a property a thing? Is a property nothing? **What can one know of things which exhibit no property?** What can one evaluate of a thing which exhibits no property? Is no property common to everything? Sivashanmugam's Inclusion Principle (SIP) states that **no two things can be without a common property.** *What properties are exhibited by everyone and everything?* What are the criteria to distinguish things from their properties?

None of the preceding questions can be justifiably answered without exhaustively analyzing the human knowledge. No educational system wants people to analyze the knowledge base and find 'the knowledge which no one can have'. **These open ended questions can prepare and set the student minds to acquire, analyze, integrate and articulate the knowledge on diverse things.**

No one **except the intellects** can have the knowledge to make a thing which cannot exhibit: 1. divisibility 2. comparability 3. connectivity 4. disturbability 5. reorderability 6. substitutability and 7. satisfiability.
